STATEMENT
CHLORINE IN SK BROWN PAPERS

In the Paper Packaging Industry, chlorine is mainly used in the pulp bleaching process.

Brown papers (kraftliners and fully recycled papers as testliners and flutings) are not produced out of bleached pulp.

Therefore, we can state that brown papers (kraftliners, and fully recycled papers as testliners and flutings) produced by Smurfit Kappa paper mills do not contain chlorine unless at trace levels linked to recycling recovered papers.

This declaration, ref. AC 700 12013, consists of 1 page.

Issue date: 7th of September 2012
Renewal date: 6th of September 2014

Eric Savary
Product Safety Manager, Paper Division
